## Customer Success Stories

### ***A Federal Client***

#### ***Business Problem***

This customer was hampered by their legacy incident response capability. The Nixsun investigative solution in place was inefficient, not improving incident time to resolution and lacking robust analysis capability. Additionally, the client had an urgent need to understand the basis of an emerging network threat. Their public website was defaced, ultimately exposing additional vulnerabilities in their web infrastructure.

#### ***The Solution***

Very shortly after installing NetWitness, several serious breaches were quickly prevented. A complete reconstruction of the attack was now possible, enabling the network staff to efficiently react. "This was a sophisticated SQL injection attack," said the Director of Information Security. "With NetWitness in place, my time to resolution improved from many hours to 20 seconds. This has proven to be an invaluable tool for my team and our network, as a result, is much more secure today."

### ***One of the Nation's Largest Non-Profit Agencies***

#### ***Business Problem***

As one of the nation's largest not-for-profits this organization has a multitude of security concerns tied to protecting member data and protecting against internal misuse. Required by California law to suffer significant fines and public embarrassment if member data is leaked, the agency turned to NetWitness for assistance. In particular, they were concerned about anomalous alarms being generated by their Websense product. There were indicators, based on packet analysis, that a potential threat existed, but they lacked the ability to definitively determine the root of the problem or whether it made sense to immediately dedicate resources to address the problem.

#### ***The Solution***

After a thorough competitive analysis, NetWitness was selected and installed as the primary incident response vehicle. The tool was integrated into the network infrastructure in a few hours. The suspicions concerning the Websense alarms were merited. An employee was potentially violating policies, ultimately placing the organization at risk. Without the NetWitness solution, it was impossible to isolate the source and intent of the event. And, while no data breach occurred, the client was relieved to have an intuitive console-driven interface that provided the forensic context required to ascertain the nature, source, and scope of this and other threats. "My ISS sensors, corporate firewalls, and comprehensive policies were not enough," said the non-profit's IT director. "I needed NetWitness to quickly distinguish between actionable and non-actionable threats. My ability to now make these determinations is near instant as opposed to painstaking and unreliable."

## **A Government Agency**

### ***Business Problem***

Boasting massive requirements for guaranteeing that employees are using government resources only for purposes related to official duties, the agency turned to NetWitness to address insider threat and misuse protection concerns. Additionally, this agency maintained significant needs to secure proprietary information from disclosure to the general public. With a requirement to maintain two years of data online, the agency was fundamentally handicapped in its ability to guarantee data security because no tool existed to forensically diagnose suspect incidents across the breadth of that data store.

### ***The Solution***

Following the installation of NetWitness software, the agency was able to scan massive volumes of data for anomalous, suspicious behavior. "Prior to getting the NetWitness solution in place, a time-consuming, painful analysis of this data was our last resort. Today, we can quickly conduct investigations and guarantee against internal misuse. In fact, this software is so powerful, we now maintain it as the only tool used for quickly getting the answers we need."

### ***About NetWitness***

NetWitness simplifies the process of identifying and investigating complex network threats through a cost-effective infrastructure of data recorders and a versatile suite of analytic applications.

NetWitness software significantly reduces time to resolution and provides a comprehensive contextual view into the extent of any threat or breach in security.

### ***Our Clients***

Current customers include Fortune 500 companies, national intelligence agencies, federal and state law enforcement agencies, not-for-profit organizations, and the Department of Defense.
