

Instantly Respond to Network Incidents and Investigations with **NetWitness Analysis Software**

Your Network is Melting Down.

- *Is this an external attack or a network anomaly?*
- *Was it an employee accident or a malicious insider attack?*
- *You've got multiple IDS sensors firing and a SEIM that creates a ton of logs you need to analyze—where do you start?*
- *It's going to take days/weeks to analyze this data but you need answers now to prevent additional damage.*
- *NetWitness' forensics product analyzes network data in motion and creates a comprehensive, easy-to-understand report with actionable results in a matter of minutes.*

When You're in the Business of Analyzing Nations' Network Traffic on a Daily Basis, an Enterprise Network is a Straightforward Assignment

NetWitness software is the only Network Traffic Analysis solution on the market today designed from the ground up to analyze network traffic, not simply monitor it. After years of collaboration with US Intelligence agencies, NetWitness unveiled a product that tracks massive volumes of data in motion, instantly answering the critical forensic questions—who, what, where, when, how, and why. The analyst and business-user alike can instantaneously leverage a forensic analysis of raw packet data representing all OSI stack layers—written in plain English, not complex network-speak.

You can use NetWitness to:

- Speed security audits and investigations
- Instantly isolate the source of internal or external attacks and expedite incident response
- Enhance and expand existing security infrastructure

Implementation Details

NetWitness is offered as software or as a network appliance. It can be used to collect live network traffic, process pre-collected packets from other collection systems, or interoperate with existing network security technologies and fraud detection systems.

Benefits and Features

- **Productivity Gains and Enhanced ROI:** With **NetWitness**, data that ordinarily requires hours, days, or weeks to analyze is profiled and analyzed in minutes, resulting in dramatic increases in security analyst productivity.
- **Full Traffic Analysis—Not Just Samples:** Your information security analysts can't keep up with the overwhelming amount of traffic analysis requirements. With **NetWitness**, your staff won't be limited to analyzing just data samples, they can analyze all your network traffic—and truly provide a heightened level of security for your enterprise.
- **Valuable Intelligence:** **NetWitness** provides comprehensive reporting on business rules and policies that help identify potential risk sources.

TESTIMONIALS

"NetWitness provides the best presentation of network data I've seen."

— **Search.org**

"NetWitness is more than capable of handling the volume of information generated by large networks."

— **SC Magazine**

About NetWitness

NetWitness simplifies the process of identifying and investigating complex network threats through a cost-effective infrastructure of data recorders and a versatile suite of analytic applications.

NetWitness software significantly reduces time to resolution and provides a comprehensive contextual view into the extent of any threat or breach in security.

Our Clients

Current customers include Fortune 500 companies, national intelligence agencies, federal and state law enforcement agencies, not-for-profit organizations, and the Department of Defense.

Specifications and Requirements

Software

- Windows XP or 2003 Server
- 1GB RAM (2GB or more recommended)
- Single 3 GHz Intel or AMD Processor (Dual Core Recommended)
- 1 Ethernet Port
- Internet Explorer v6
- Ample data storage for network collection

Appliance Server

- 2 U rack mountable appliance, redundant power supply; UL, FCC, CE, and VCCI approved
- Security hardened OS
- Two 100/1000 Ethernet Interfaces
- 4.5 TB Total Storage with external expansion available
- Optional accelerated collection, SAN, and SAS expansion cards
